## About this resource

We recommend pupils do not use a calculator.

There are many ways to use this resource.

You could select topics that your pupils need to recap to improve their confidence and work through a selection of questions throughout a week.

Alternatively, you could select a question from each group for pupils to work through to expose them to different topics, as they would see in an exam.

Pupils could participate in the marking of the questions they have answered. This can be used to provoke discussions about methods used to solve a question, as well as drawing attention to the number of marks associated with each question.

## Suggestions for pupils

- Follow the instructions for each question.
- Use the space around the question to complete any working out.
- You may get a mark for showing your method.
- Remember to go back and check your work.

## Marks

The number under each box on the right hand side tells you the maximum number of marks for each question.

86	Fran wants to make a rectangular enclosure for her rabbit to run around in the garden safely. She has 20m of wire fence. The length and width of the rectangle must be in whole metres. Explain how Fran could find all the possible rectangles she could make using the wire.	Explanation should describe a methodical approach to finding the answer. For example: Fran could use a table to record all the different lengths and widths that give a perimeter of 20m. Fran could start with a width of 1m and a length of 9m and then increase the width by 1m each time to find all the possibilities	This is an open-ended question and has been designed to encourage children to use reasoning to describe how to make sure that they find all possibilities when investigating perimeter.	1
